DETAILED ACTION

Election/Restrictions

1. Because applicant has not responded to the Notice of Non-Compliant Amendment mailed June 24, 2005, the non-complaint preliminary amendment filed September 25, 2003, is not entered. Thus, the below restriction requirement is made for the originally filed claims 1-10.
2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1 and 2 drawn to an elongated pile article (i.e., intermediate product A), classified in class 428, subclass 92.
 - II. Claim 3, drawn to a molded carpet module (i.e., final product 1), classified in class 428, subclass 95.
 - III. Claim 4, drawn to a pile surface structure (i.e., final product 2), classified in class 428, subclass 93.
 - IV. Claim 5, drawn to automotive pile surface structure (i.e., final product 3), classified in class 428, subclass 95.
 - V. Claim 6, drawn to a tuftstring carpet assembly (i.e., final product 4), classified in class 428, subclass 94.
 - VI. Claims 7-10, drawn to a method of making a pile article perform, classified in class 156, subclass 173.

The inventions are distinct, each from the other because of the following reasons:

3. Inventions of Group I and Groups II, III, IV, and V are related as mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this

Art Unit: 1771

relationship if the intermediate product is useful to make other than the final product (MPEP § 806.04(b), 3rd paragraph), and the species are patentably distinct (MPEP § 806.04(h)). In the instant case, the intermediate product is deemed to be useful as the intermediate product A can be employed to make any of the final products 1, 2, 3, or 4 and the inventions are deemed patentably distinct since there is nothing on this record to show them to be obvious variants. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

4. Inventions of Group IV and Group I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product can be made by hand.

5. Inventions of Groups II, III, IV, and V are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different functions in that each invention produces a different final product.

6. Inventions of Group II, III, IV, V and Group VI are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different

Art Unit: 1771

modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01).

In the instant case the different inventions method of Group VI does not produce the final products of Groups II, III, IV, or V.

7. Because these inventions are distinct for the reasons given above and the search required for Groups I, II, III, IV, and V is not required for Group VI, restriction for examination purposes as indicated is proper.

8. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

9. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

10. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Conclusion

11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cheryl Juska whose telephone number is 571-272-1477.
